

AudiSoft delivers next-generation Mobile Telepresence solution

October 1st, 2011

Longueuil, Canada & Boulogne Billancourt, France – AudiSoft Technologies today announces the launch of the next-generation of its Wireless Mobile Communication Solution, including AudiSoft Frontline HD Series, AudiSoft Expert & AudiSoft Server - <http://www.audisoft.net/next-generation/> offering feature-rich functionalities for Mobile Telepresence in operation between Remote Experts and Field Agents over various wireless networks (i.e. WiFi, 3G/4G, Satellite, Mesh).

Integrated into Corporate video conferencing networks or stand-alone, the AudiSoft's Wireless Mobile Telepresence technology pushes the limits by offering the capability to reach secluded areas around the world (indoor or outdoor) where remote expertise is required to fix mission critical field issues. AudiSoft Solutions are built to Corporate IT security & In-operation standards to last in Industrial or medical environments, where extreme temperatures, humidity, dust, or hazardous gas/air mixture areas are ubiquitous.

Well adopted in growing vertical applications like Industrial Maintenance, Machinery Inspection, Product Quality Control, Distance Learning, Medical Assistance and Energy Production, AudiSoft proves once again its leadership in the field of Mobile Telepresence with its open standards and protocols (Windows7, H.264, SIP...). "AudiSoft is leading the way with its End-to-End Mobile Telepresence solutions from software applications running on multiple hardware platforms, including tablets, through an open architecture communication server, all the way to the "bleeding" edge of Innovative technology with our wearable and Mobile Frontline HD series" – Says Marie Lapalme, Co-CEO and CTO of AudiSoft Technologies.

The continuous shortage of industrial experts, affordable and prevalent Internet bandwidth, in addition to Gartner Group recognizing the « Mobile Remote Assistance » as one of the fastest growing sectors, makes AudiSoft Solutions the logical path for the new "hedge" of industrial and medical applications, worldwide.

As a Polycom ARENA Partner, AudiSoft Technologies is integrating AudiSoft Solutions with Polycom infrastructure seamlessly; developing 2-way video/audio with SIP, and multipoint communications. "AudiSoft will reach an important milestone by providing the market its innovative hands free Mobile Telepresence solutions that can extend Customers Mobile Applications in the field, using their existing Polycom infrastructure" – underlines Jean-Francois Thau, President & Co-CEO of AudiSoft Technologies.

To scale these Business opportunities worldwide, AudiSoft is building a network of first class Value-Added Distributors (VADs) supporting a variety of resellers (VARs), including Unified Communications VARs, Vertical Markets VARs, Network VARs, and Application (SW & HW) VARs. This new 2-tier distribution model reflects the next wave of growth driven by verticals Applications.

About AudiSoft

AudiSoft specializes in business-to-business wireless video and audio technologies, which provide unprecedented quality and mobility in video communications. The company delivers fully integrated and interoperable end-to-end solutions, which can deploy on any kind of telecommunication network and integrate with any existing IT environment. AudiSoft solutions are compliant with leading video conferencing systems. AudiSoft is a member of the Polycom ARENA Partner Program.
